

Control Head Cover

for Admiral P3, Commander P2 and Navigator G2 Systems

Installation Brief

Introduction

The Control Head Cover (PN 65610076) for Admiral P3, Commander P2 and Navigator G2 Systems provides protection for the Head, when it is not in use, from water, rain, dirt, grime and other contaminants. It also protects the plastic material of Head's case and the internal LCD panel from the Sun's UV rays.

It is designed to be used on Control Heads which have been mounted using a Bracket Mount Kit (PN 30110006), or with a Surface Mount Bezel Kit (PN 30110004).

The Cover is installed simply by pushing it onto the Control Head. There is no retention mechanism – it is designed to be a tight fit, so that it is held onto the Head by a combination of friction & air pressure; the bump in the lower right corner is for clearance over the Control Head's Course Change Knob. To remove the Cover, grasp it by the top and bottom sides, and pull it off.

The cover is supplied in a kit (PN 30110019) – the cover itself, and these instructions.

The pictures below show the various Head mounting options, with and without the Cover installed.

Note: on the Bracket Mount, the bezel from the Surface Mount Kit must be installed on the Head, as noted in that Kit's Instructions, and shown in the photo above. The Cover can not be used on a Head that does not have that bezel.

- ❗ The Cover can not be used on a head mounted with a Flush Mount Bezel Kit (PN 30110003). However, since flush-mounting is intended to be used only for inside-the-boat Control Head installations, there is typically no need for a cover in that situation.
